GPU-batched forward dynamics throughput · L40S · ours (LP) vs MJX (fp32 / fp64) vs mujoco-warp (fp32) vs sequential cusadi

Forward dynamics only — no Jacobian. MJX and mujoco-warp are purpose-built for this workload. Sequential cusadi wins at B=1 (no smem prologue overhead). Ratios annotate ours vs MJX fp32 (MJX's native, strongest precision for fwd dynamics). Both: contacts disabled, same URDF, 10 warmup + 100 timed; JIT excluded.
