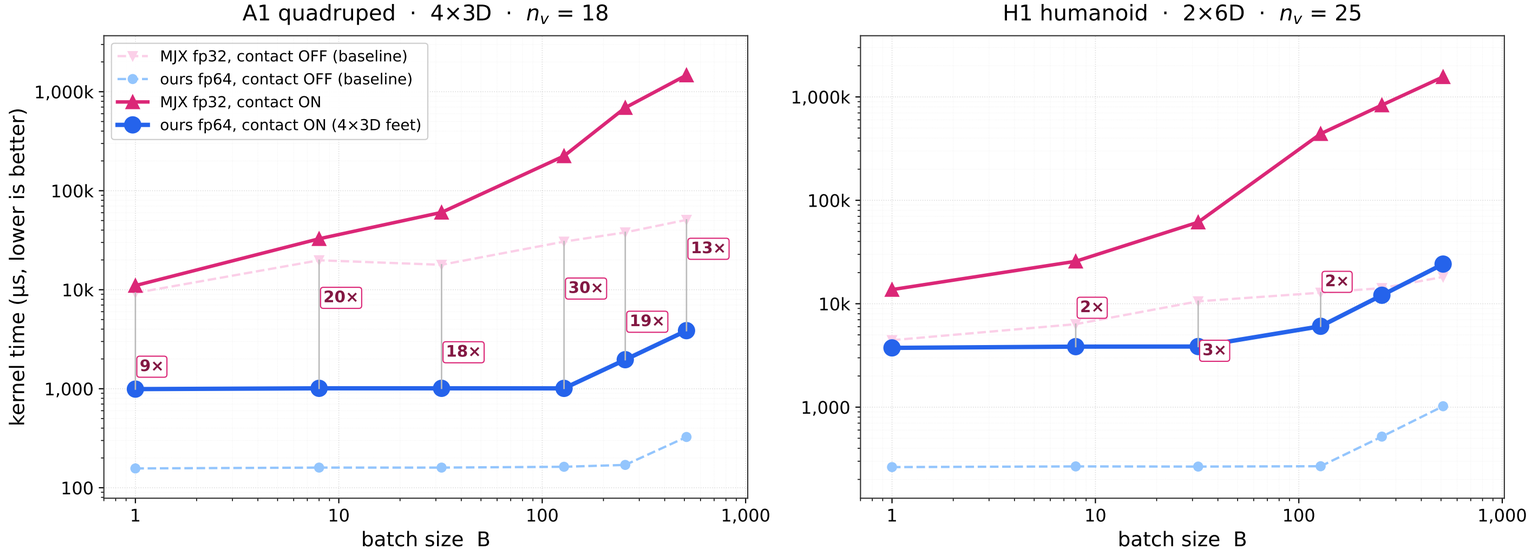
GPU-batched constrained ABA Jacobian throughput · L40S · ours (LP fp64) vs MJX (fp64), contact ON / OFF



Solid curves = contact ON. Dashed curves = baseline contact OFF (same numbers as the main Jacobian comparison). LP folds foot-contact wrenches into the analytical Pinocchio Jacobian via Carpentier's algorithm; MJX runs the full LCP solver inside jacfwd. mujoco-warp not shown — no autodiff path. Same URDF, 10 warmup + 100 timed; JIT excluded.
